Heart Development

- The second heart field is a population of cardiac progenitor cells in pharyngeal mesoderm

- Perturbation of second heart field development results in congenital heart anomalies

- Chamber formation and conduction system development are regulated by a network of T-box transcription factors

- The epicardium is required for myocardial growth and coronary smooth muscle development

**ESC WG on Development, Anatomy and Pathology
Annual meeting – Berlin, 26-29 September 2013**

Weinstein Cardiovascular Development Meeting, USA

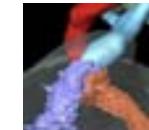

Berlin Cardiovascular Development Meeting
Annual meeting of the ESC WG on Development, Anatomy and Pathology with participation of the AEPC WG on Genetics, Basic Science and Inherited Muscle Disease and the German Society for Pediatric Cardiology

September 26th - 29th, 2013
Max Delbrück Center for Molecular Medicine (MDC) Berlin-Buch – Conference Center, MDC.C, Robert-Rössle Str 10 • 13125 Berlin

Topics:

- Cardiovascular genetics
- Cardiac developmental biology
- Cardiac systems across the evolutionary spectrum
- Cardiac growth, progenitors & regeneration

Hands-on Course: Yen Ho (UK), David Sedmera (CZ)
Katharina Wassilew (D), Lucile Houyel (FR)

EU FP7
