Field of scientific interests

Coronary Artery Disease, Heart Failure, Health Related Quality of Life

Office address

Akkuratova str.,2
St.Petersburg
197341, Russia
E-mail nedoshivin@almazovcentre.ru

Dear colleagues!

It is an outstanding honor for me to apply for the position of a member of the Nominating Committee of the European Society of Cardiology for the period 2020 – 2022.

I am convinced that the European Society of Cardiology is a friendly family of professional societies representing all European countries. Russian cardiologists are currently rapidly integrating into the international medical community. Taking this into account, it appears important to me that the ESC Nominating Committee might include a representative of the Russian Society of Cardiology, which strives for exchange of ideas, cooperation and integration with all Constituent Bodies.

My long-term professional experience as a medical doctor, a researcher, and a manager, including my present positions as the Secretary General of the Russian Society of Cardiology and the Secretary of the Academic Board of a large medical research center, allows me to see clearly the difficulties that both individuals and institutions have to overcome in this very rapidly changing world of contemporary medicine.

I think that an ESC Nominating Committee member's role is to promote an understanding of the specific needs of National Cardiac Societies. I hope and I am sure that this corresponds well with the general objectives of the European Society of Cardiology and will be beneficial for the whole family of the ESC. Fuller integration of National Cardiac Societies will bring their unique clinical and socio-political experience into the ESC activities and will help to cover the gaps in collaboration among the Constituent Bodies within the ESC.

Definitely, we have very much in common as we are facing the same challenges and aiming at the same goals to decrease cardiovascular mortality all over Europe. To achieve this, we have to share our knowledge and our practical experience brought from the countries with different healthcare systems. In my view, this will give an additional advantage to the ESC in its development and in the distribution of its values to a bigger family of European countries and worldwide.

In conclusion and irrespective of the voting result, I am very grateful for this unique chance and a privilege to address my ESC colleagues, and to share my views.

Respectfully yours,

Professor Aleksandr Nedoshivin, FESC
