

# ESCquisite Trial

## (ESC Quality Investigation Trial Evaluation)

**Problem:** ESC Guidelines are trusted documents downloaded in the millions, but they are large documents and over 20 versions currently cover the entire spectrum of CVD. For physicians this impossible to cope with.

However, despite innovative treatments developed, the recommendations are not followed in real world practice as expected causing unnecessary hospitalisations, death affecting patients and causing economic loss for industry partners.

**Solution:** Thus, the ESC has developed a Chatbot using LLP involving all currently valid ESC Guidelines to empower clinicians to implement optimal treatment protecting patients from unnecessary hospitalisations and death. We will test the impact of the chatbot on these issues in clustered RCT

**Ask:** We need co-creation with colleagues, industry and patients of the design of this trial and recruitment sites as well as appropriate funding.
