The ESC and its Strategy

Prevention would save lives, if..

% *not* reaching Secondary prevention in coronary artery disease guideline targets 1 year after index event

Poor implementation is reflected in the unequal death rate due to Cardiovascular disease across the EU?

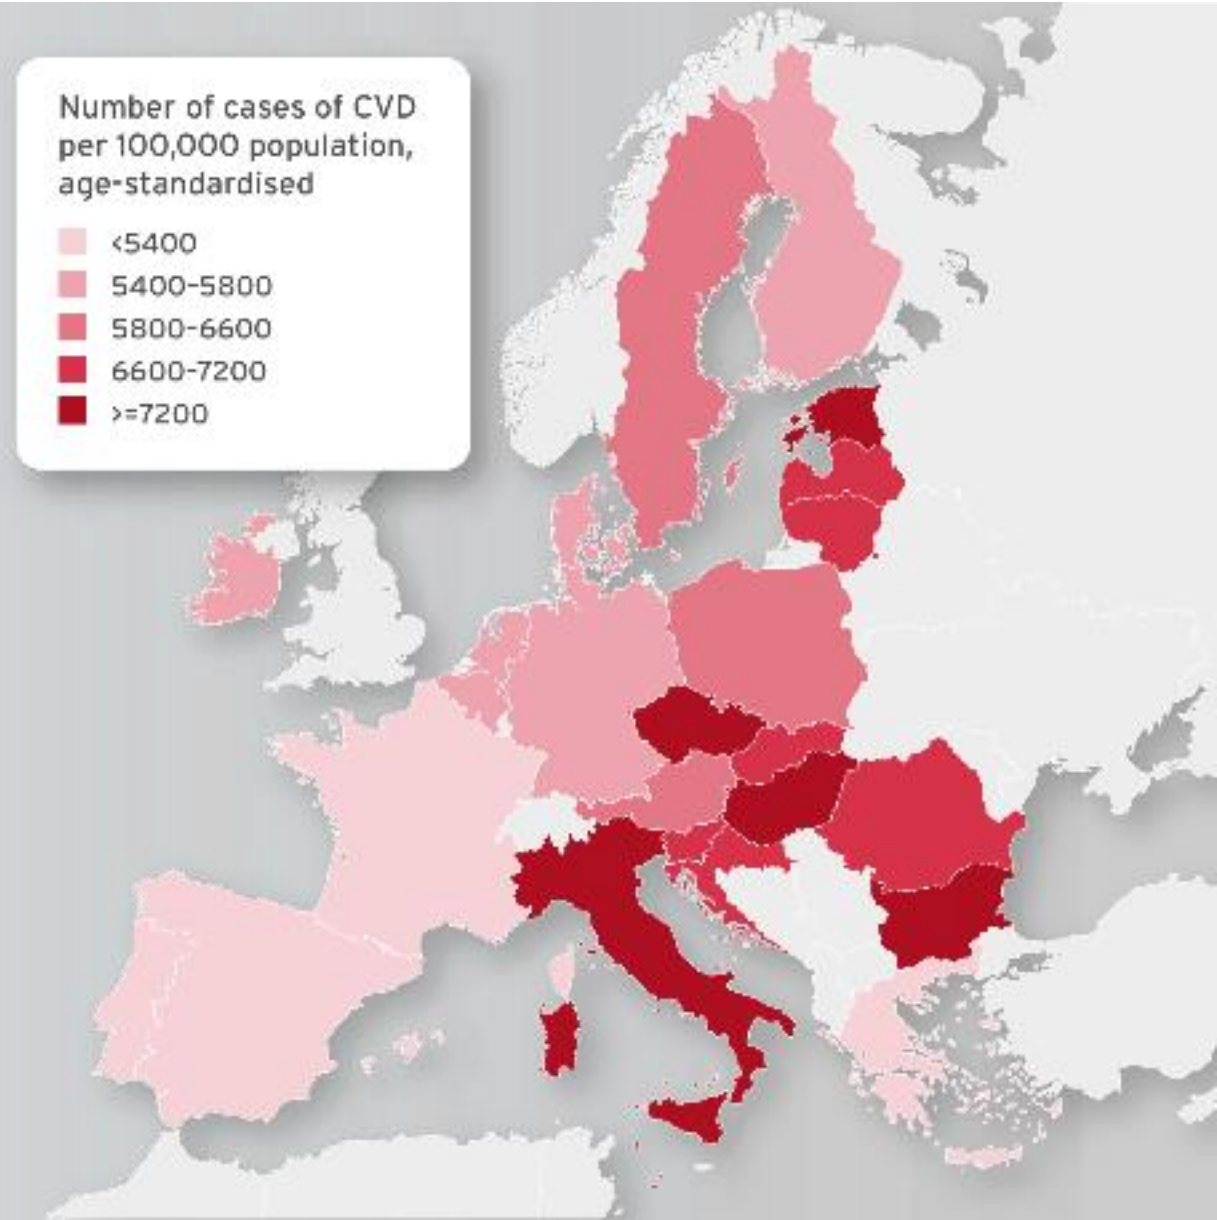

CVD mortality rates vary across EU

- 20% at its lowest to 65% at its highest

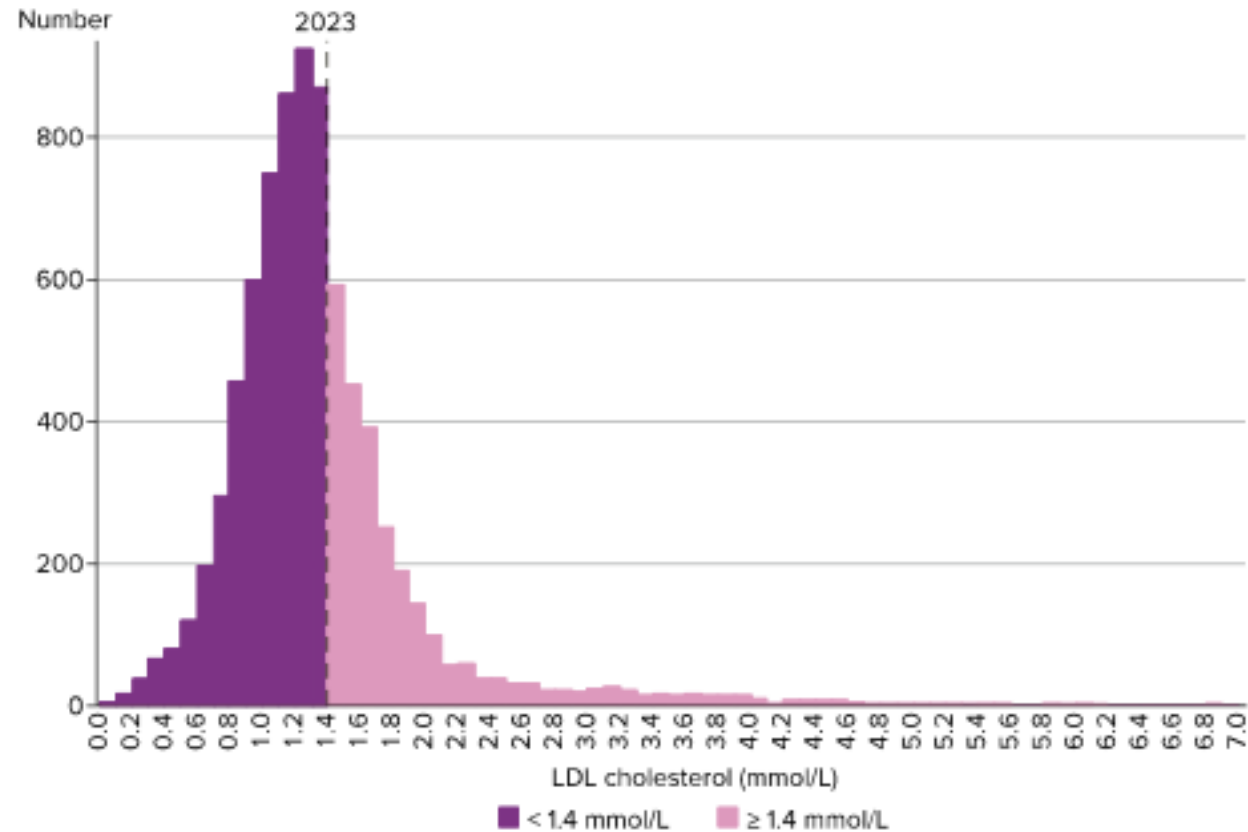

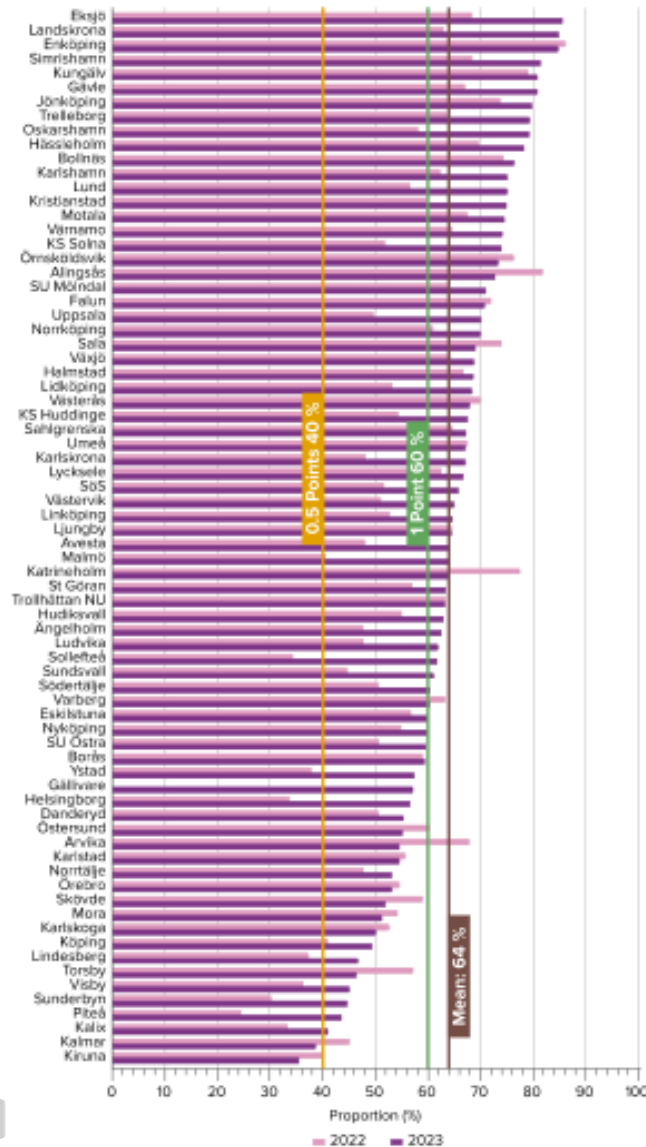

Population disparities within countries

- *Age, gender, ethnicity, socioeconomic status and region*

**The fight for CV health is
the fight for equality**

How secondary preventive goals are reached in Swede Heart- LDL goal of < 1.4 mmol/L

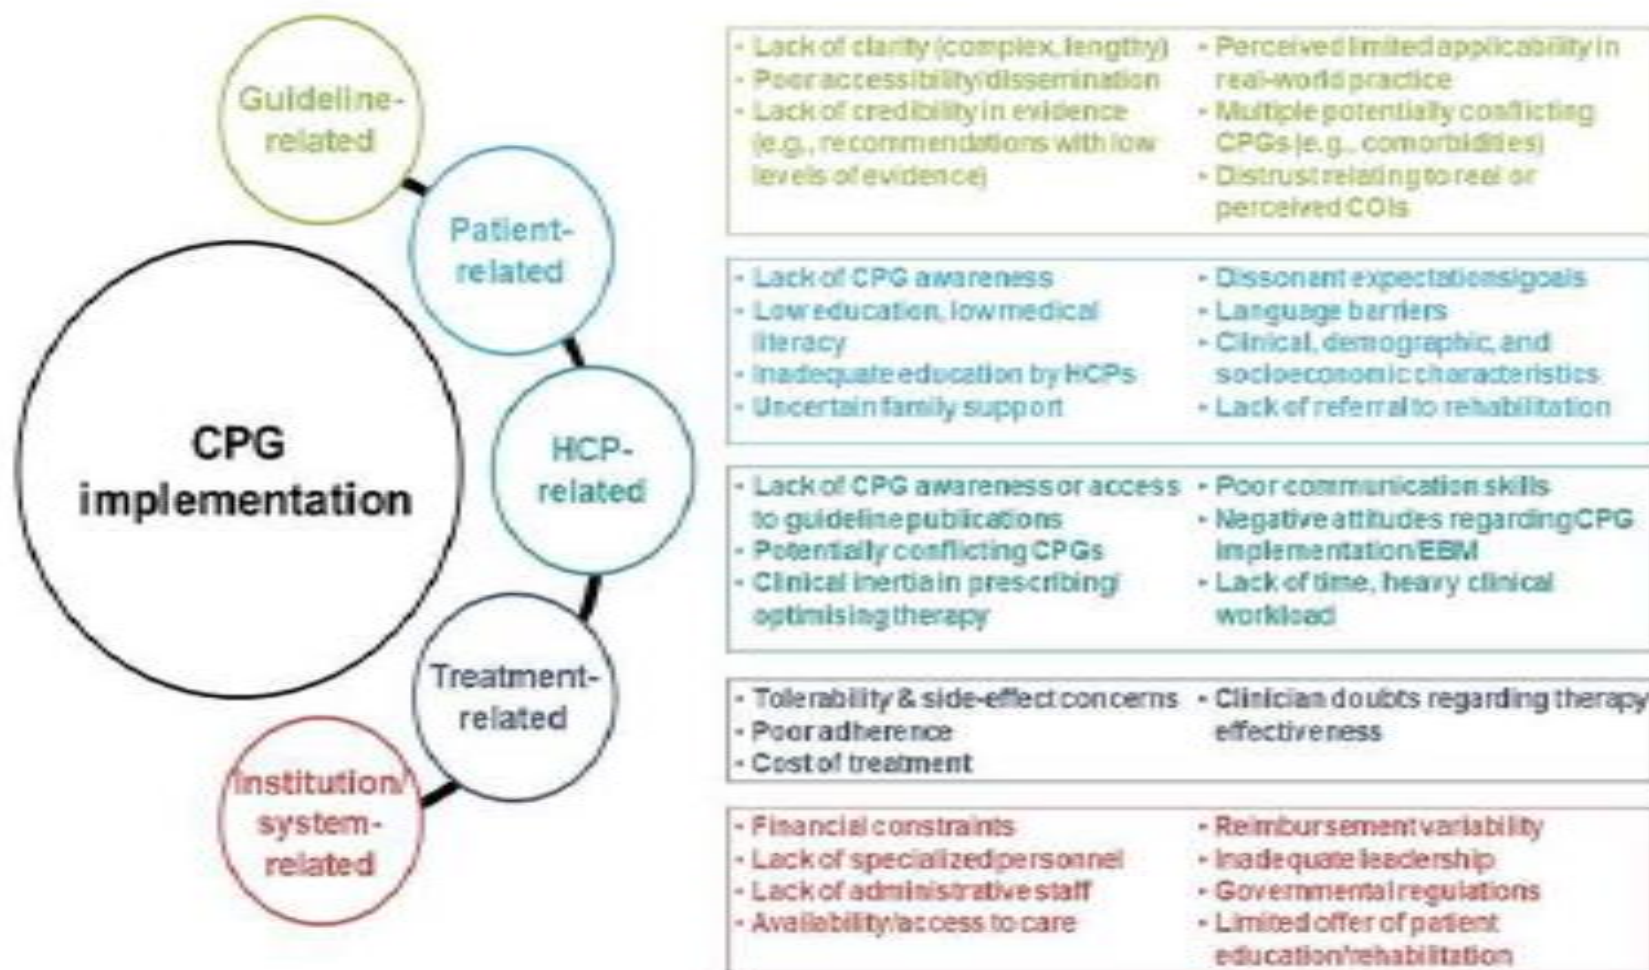

CRT on Implementation of guidelines at a national level

Results of Previous Cardiovascular round table discussions May, July 2024

Identified barriers /opportunities /new tools for guidelines implementation
such as digital transformation, AI and EuroHeart /ESC registries,
post market surveillance

Highlighted importance of alignment with national cardiac societies
and European Health policies, regulatory bodies and reimbursement frameworks

Barriers and opportunities based on previous CRTs
