Q6 You define “frail” a patient when problems in the following features are present (multiple answers):

Answered: 36 Skipped: 5

Answer Choices	Responses	Count
Muscle mass	69.44%	25
Mobility	94.44%	34
Strength	47.22%	17
Balance	52.78%	19
Cognition	77.78%	28
Nutrition	66.67%	24
Weight	72.22%	26
Endurance	27.78%	10
Physical activity	69.44%	25
Total Respondents: 36		

Q7 Which comorbidities are more common when you define a patient to be “frail” ?

Answered: 36 Skipped: 5

Answer Choices	Responses	
Atrial fibrillation	72.22%	26
Bradycardia-tachycardia syndrome	38.89%	14

EHRA EP Wire on frailty and arrhythmias in everyday clinical practice

Cancer	61.11%	22
Chronic obstructive pulmonary disease	47.22%	17
Chronic renal failure	75.00%	27
Claudication / foot ulcer	25.00%	9
Congestive heart failure	69.44%	25
Coronary artery disease	30.56%	11
Dementia	72.22%	26
Depression / Mood disorders	44.44%	16
Diabetes	36.11%	13
Disability/Dependency	72.22%	26
Falls / Injuries	63.89%	23
Hypertension	36.11%	13
Other	5.56%	2
Total Respondents: 36		

Q8 Did you manage “frail” patients in the last 12 months?

Answered: 36 Skipped: 5

Answer Choices	Responses
Yes	91.67% 33
No, I had no opportunity to manage them	8.33% 3
No, I think that it is not particularly useful and cost-effective	0.00% 0
Total	36

Q9 In your opinion, which of the following categories of patients could have a major benefit from a medical intervention for rhythm disturbances (i.e. control of rate/rhythm in atrial fibrillation, pacemaker implantation) (multiple answers)?

Answered: 35 Skipped: 6

Answer Choices	Responses
Robust (prompt recovery from stressors)	77.14% 27
Sub-clinical frailty (resilient, with slow/incomplete recovery from stressors)	85.71% 30
Early frailty (frailty is manifest, poor tolerance to stressors, no disability)	85.71% 30
Late frailty (frailty is manifest, poor tolerance to stressors, very slow recovery, disability development)	45.71% 16
End-stage frailty (severe frailty is manifest, dependency development, high risk of death in the next 12 months)	8.57% 3
I do not know	2.86% 1
Total Respondents: 35	

Q10 Could an Arrhythmia team exert a positive role in the decision making process of frail individuals with cardiac rhythm disturbances?

Answered: 35 Skipped: 6

Answer Choices	Responses	
Yes	82.86%	29
No	17.14%	6
Total		35

Q11 Who should be involved in the Arrhythmia Team to treat frail subjects? (Multiple answers)

Answered: 35 Skipped: 6

Answer Choices	Responses
Electrophysiologist	74.29% 26

EHRA EP Wire on frailty and arrhythmias in everyday clinical practice

Cardiac implantable electrical device (CIED) specialist	71.43%	25
Clinical cardiologist	88.57%	31
Specialist in internal medicine	37.14%	13
Geriatrician	82.86%	29
Psychologist	28.57%	10
Psychiatrist	14.29%	5
Geneticist	0.00%	0
Expert in palliative medicine	37.14%	13
Expert in spiritual/religious matters	5.71%	2
Nurse	68.57%	24
Physiotherapist	28.57%	10
Social worker	28.57%	10
Family members	62.86%	22
Other	2.86%	1
Total Respondents: 35		

Q12 In your opinion, what is the best strategy to manage atrial fibrillation in a frail patient?

Answered: 35 Skipped: 6

Answer Choices	Responses	Count
Rate control strategy	40.00%	14
Rhythm control strategy	2.86%	1
Both of them can be considered, according to clinical situation	57.14%	20
Neither of them; I believe it is too late to have some clinical benefit	0.00%	0
Total		35

Q13 Which strategy do you prefer to prevent thromboembolic complications in a frail patient with atrial fibrillation? (Multiple answers)

Answered: 35 Skipped: 6

Answer Choices	Responses
Vitamin K antagonists	14.29% 5
NOACS (i.e., dabigatran, rivaroxaban, apixaban or edoxaban)	71.43% 25
Aspirin and / or clopidogrel	0.00% 0
Low molecular weight heparins	0.00% 0
It depends on the clinical characteristics of the patient (i.e., renal function, weight, patients' compliance and the ability to repeatedly measure INR and / or to adjust the dose of VKA, etc.)	62.86% 22
None of them, because they are not safe in frail patients	0.00% 0
None of them, because the net clinical benefit may not be positive in frail patients	5.71% 2
Total Respondents: 35	

Q14 In your daily practice, what are the most important reasons not to prescribe an anticoagulant drug to a frail patient with atrial fibrillation? (Multiple answers)

Answered: 35 Skipped: 6

Answer Choices	Responses
Age	11.43% 4
Prior bleed	48.57% 17
Bleeding risk	45.71% 16
Active bleeding	65.71% 23

EHRA EP Wire on frailty and arrhythmias in everyday clinical practice

Patient's refusal	34.29%	12
History of falls	28.57%	10
Anti-platelet therapy	14.29%	5
Comorbidities	17.14%	6
Dementia	40.00%	14
Possible lack of compliance	28.57%	10
Possible lack of assistance	11.43%	4
No existing medical / logistic justification	14.29%	5
None – I prescribe anticoagulants as much as possible to these patients	17.14%	6
Total Respondents: 35		

Q15 In your opinion, does a history of falls represent an absolute contraindication to anticoagulant therapy in a frail atrial fibrillation patient?

Answered: 35 Skipped: 6

Answer Choices	Responses	
Yes - I leave such patients without any protection against stroke	0.00%	0
Yes - I prefer left atrial appendage closure in such patients	5.71%	2
No, Vitamin K antagonists should be preferred	5.71%	2
No, NOACS should be preferred	51.43%	18
No, either Vitamin K antagonists or NOACS can be used	37.14%	13
Total		35

Q16 Thinking of all procedures which were performed in your centre in the last 12 months, what was the proportion of pre-frail or frail patients who received a cardiac implantable electrical device (CIED)? Please give your estimate

Answered: 35 Skipped: 6

Answer Choices	Responses	
We do not implant CIED in frail patients	2.86%	1
<10%	51.43%	18
10-30%	37.14%	13
30-50%	8.57%	3
>50%	0.00%	0
Total		35

Q17 Which device do you use more frequently in frail/pre-frail individuals (multiple answers)?

Answered: 35 Skipped: 6

Answer Choices	Responses	Count
Implantable loop recorder	8.57%	3
Pacemaker	100.00%	35
CRT-P device	28.57%	10
ICD/CRT-D device	8.57%	3
I do not implant frail/pre-frail individuals	0.00%	0
Total Respondents: 35		

Q18 Do you think that the possibility to monitor patient’s activity by the software of CIEDs might be of help to discover frailty development and to rapidly implement therapeutic strategies?

Answered: 35 Skipped: 6

Answer Choices	Responses	
Yes	57.14%	20
No	22.86%	8
I do not know	20.00%	7
Total		35

Q19 Have you noticed CRT-P mediated improvements in frail elderly patients (multiple answers)?

Answered: 35 Skipped: 6

Answer Choices	Responses
Yes, in cardiac performance	51.43% 18
Yes, in physical performance, with reduction of disability	37.14% 13
Yes, in health-related quality of life	54.29% 19
Yes, in cognitive performance	14.29% 5
No, I do not use CRT-P in frail elderly patients	20.00% 7
No	8.57% 3
Total Respondents: 35	

Q20 Do you think that CRT-P could be as useful in elderly “frail” patients as in younger and healthier ones?

Answered: 35 Skipped: 6

Answer Choices	Responses
Yes	40.00% 14
It could be even more useful than CRT-D – because of cost issues and lower risk of inappropriate therapies (i.e., due to atrial fibrillation, etc.)	40.00% 14
No	20.00% 7
Total	35

Q21 In your laboratory, what is the prevalence of frail patients receiving an ICD on the total ICD implanted population?

Answered: 35 Skipped: 6

Answer Choices	Responses	Count
I do not implant frail patients	17.14%	6
1%	25.71%	9
5%	28.57%	10
10%	22.86%	8
20%	5.71%	2
Total		35

Q22 Do you think that the use of a tool to quickly (10 minutes) assess the presence of frailty in patients with an ICD indication could be useful? (multiple answers)

Answered: 35 Skipped: 6

Answer Choices	Responses
Yes, to better guide treatment (i.e., use of CRT, optimization of medical therapy, etc.)	65.71% 23
