

The patient with 30 min chest pain presenting at the ER two hours after onset of symptoms

Professor Christian Mueller

Disclosures

- **Swiss National Science Foundation**

- Research support / travel support / consulting fees from several diagnostic and pharmaceutical companies

Patient case presentation #1

- **48 year** old gentleman
- Since **2 hours chest pain**, «**burning**», duration > 30 minutes, VAS 9/10
- Transient radiation to both arms, 1st episode, concomitant slight **dyspnea**

- **No medical history, no medication**
- **Risk factors:** heavy smoker, 60py
- **Hotel night manager**, married.

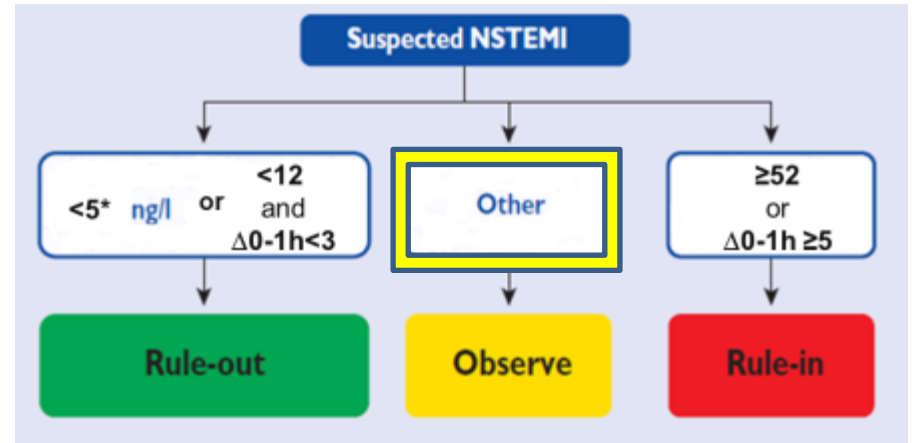

Patient case presentation #1

ECG at presentation

Patient case presentation #1

- **hs-cTnT Values**
 - 0h: 38ng/L

Patient case presentation #1

■ What would you do next?

1. Monitor & 2nd hs-cTn at 3 hour
2. Monitor & 2nd hs-cTn at 1 hour
3. Go directly to cath lab
4. Coro-CT

Patient case presentation #1

■ What would you do next?

1. Monitor & 2nd hs-cTn at 3 hour
2. Monitor & 2nd hs-cTn at 1 hour
- 3. Go directly to cath lab**
4. Coro-CT

Patient case presentation #1

Patient case presentation #1

- **hs-cTnT Values**

- 0h: 38ng/L
- 1h: 106 ng/L
- 2h: 258 ng/L
- 3h: 436 ng/L

Patient case presentation #1

- **Take home message #1**
 - Young patient, no previous history of CV disease
 - Typical chest pain for 2 hours
 - Baseline hs-cTnT = 3-times 99th percentile
 - **PPV about 90% for AMI**
 - Go directly to cath lab

Patient case presentation #2

- **76 year** old gentleman
- chest pain after lunch, constant «**pressure**» for 1.5 hours, VAS 7/10, slight intermittent radiation to the neck, no dyspnea
- complete pain relief after iv morphine 3mg

- In general **in good shape**, still working in car industry
- **Risk factors:** hypertension
- Medication: Alfuzosin (Alpha-1-Blocker)
- **Chronic renal impairment**
 - eGFR 46 ml/min (CKD-EPI)

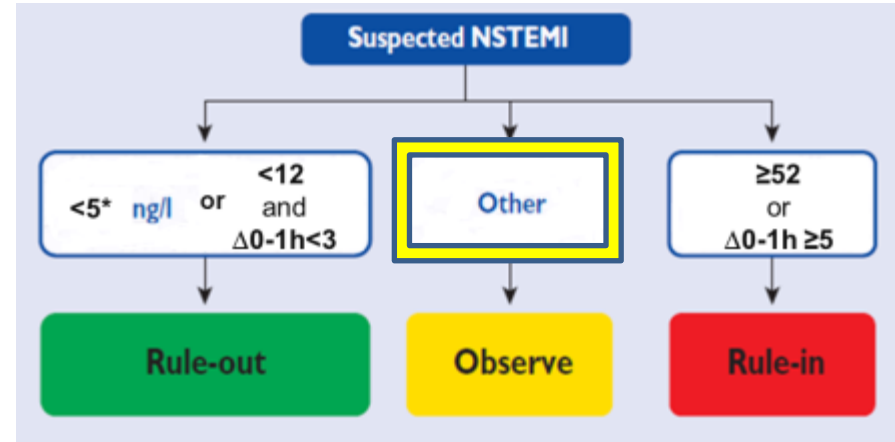

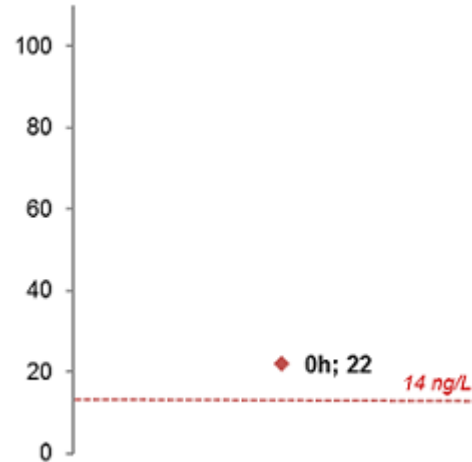

Patient case presentation #2

ECG at presentation

Patient case presentation #2

- **hs-cTnT Values**
 - 0h: 22 ng/L

Patient case presentation #2

■ What would you do next?

1. Monitor & 2nd hs-cTn at 3 hour
2. Monitor & 2nd hs-cTn at 1 hour
3. Go directly to cath lab
4. Coro-CT

Patient case presentation #2

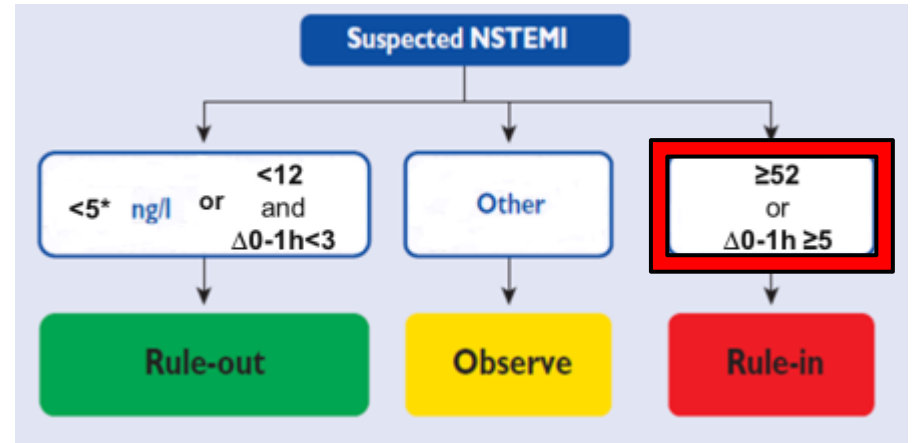

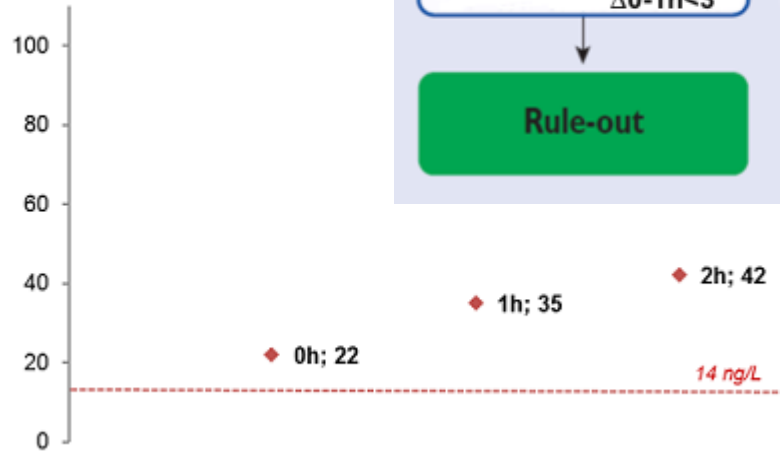

■ What would you do next?

1. Monitor & 2nd hs-cTn at 3 hour
- 2. Monitor & 2nd hs-cTn at 1 hour**
3. Go directly to cath lab
4. Coro-CT

Patient case presentation

■ hs-cTnT Values

- 0h: 22 ng/L
- 1h: 35 ng/L
- 2h: 42 ng/L

■ CCU & Coronary Angiography

Patient case presentation #2

Patient case presentation #2

- **Take home message #2**
 - Older patient, possible cardiac comorbidities
 - Baseline hs-cTnT \leq 2-times 99th percentile
 - **PPV about 60% for AMI**
 - 2nd hs-cTnT at 1 hour: Delta 7 ng/L
 - **PPV about 90% for AMI**

Patient case presentation #3

- **61 year** old gentleman,
- Since **2 hours chest pain**, «**pressure**» , duration = 30 minutes, VAS 4/10
- Constant radiation to the left arm, relief of pain while lying down

- **Intermittent AF, PVI 4 years ago**, known mitral regurgitation
- **Risk factors**: history of smoking, hypercholesterolemia

- **Medication**: None

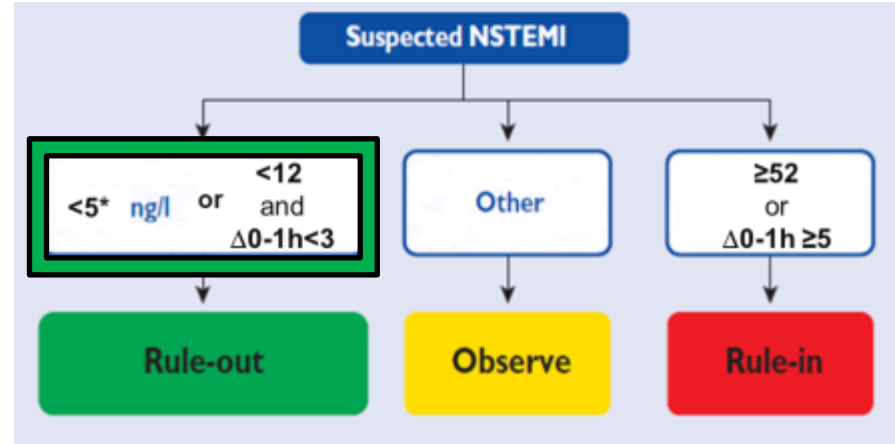

Patient case presentation #3

ECG at presentation

Patient case presentation #3

- **hs-cTnT Values**
 - 0h: 3 ng/L

Patient case presentation #3

■ What would you do next?

1. Monitor & 2nd hs-cTn at 3 hour
2. Monitor & 2nd hs-cTn at 1 hour
3. Go directly to cath lab
4. Coro-CT

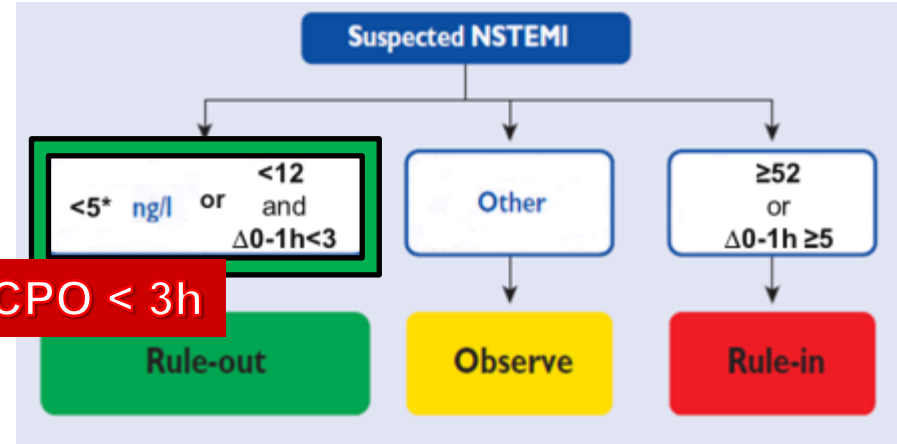

Patient case presentation #3

■ What would you do next?

1. Monitor & 2nd hs-cTn at 3 hour
- 2. Monitor & 2nd hs-cTn at 1 hour**
3. Go directly to cath lab
4. Coro-CT

Patient case presentation #3

- **hs-cTnT Values**
 - 0h: 3 ng/L

Patient case presentation #3

- **hs-cTnT Values**

- 0h: 3 ng/L
- 1h: 4 ng/L
- 3h: 4 ng/L

- Patient discharged, 7 days later myocardial perfusion imaging (MPI)

SRS = 0
 SSS = 0
 SDS = 0

LVEF: 56%
 Ca-Score: 7 (Agatston)

Patient case presentation #3

- **Take home message #3**
 - Baseline hs-cTnT ≤ 3 ng/L is very low
 - **PPV $<5\%$ for AMI**
 - Would allow immediate rule out if CPO ≥ 3 hour
 - **CPO is 2 hour, rule out at 1 hour**
