Prevention of Cardiovascular Disease

Influencing National and European policies

Policymakers’ perspective

16th November, 2109
Key facts

- CVDs are the number 1 cause of death globally.
- An estimated 17.9 million people died from CVDs in 2016, representing 31% of all global deaths. Of these deaths, 85% are due to heart attack and stroke.
- Over three quarters of CVD deaths take place in low and middle-income countries.
Prevention of Cardiovascular Disease

Influencing National and European policies

Key facts

- 45% of all deaths in Europe and 37% of all deaths in the EU.
- 3.9 million deaths in Europe and over 1.9 million deaths in the European Union (EU).
- CVD is responsible for the loss of more than 64 million DALYs in Europe (23% of all DALYs lost) and 26 million DALYs in the EU (19%).

Prevention of Cardiovascular Disease

Influencing National and European policies

Key facts

– People with cardiovascular disease or who are at high cardiovascular risk need **early detection and management using counselling and medicines, as appropriate**.

– Most cardiovascular diseases can be prevented by **addressing behavioural risk factors such as tobacco use, unhealthy diet and obesity, physical inactivity and harmful use of alcohol using population-wide strategies**.

Prevention of Cardiovascular Disease

Influencing National and European policies

Health Policies Priorities

- Salt reduction, saturated fat, and added sugar content of foods and portion size.

- Legislation to ban industrially produced trans fatty acids.

- The use of economic tools (taxes and subsidies) to make healthier foods more affordable and less healthy foods more expensive.

- Pricing strategies to promote healthier food choices.
Prevention of Cardiovascular Disease

Influencing National and European policies

Health Policies Priorities

- “…The complexity of socioeconomic factors, other policies, and other contextual factors needs to be understood to increase confidence that public policies will be effective and efficient”…

- “…The issues of cost-effectiveness and generalizability of results underscore the need for similar interventions tested for effectiveness in different settings”…
Prevention of Cardiovascular Disease

Influencing National and European policies

Health Policies Priorities

Universal Health Coverage

- Improve health and reduce and where possible eliminate inequalities in health.
- All people access to needed services.
- Provide quality assured clinical treatment and care appropriate to need and based on evidence.
- Support the role of people in promoting their health individually and collectively.
Health Policies Priorities

Common goal: “the improvement of the health conditions of the populations”.
To promote equity in health conditions, access and coverage of services and financing of services;
To improve quality of care from the technical standpoint and the user’s perspective;
To increase the efficiency of health financing, and allocation and management of resources;
To ensure sustainability
To promote social participation in planning, management, delivery and evaluation of health services.
