

EHRA Education

WEBINAR

Redefining Electrophysiology - Signal Information that Matters

When: 7 April 2015

Time: 18:00 to 19:00 CET

CME: The webinar is reviewed for accreditation by EBAC

Register online for free until 5 April

Cardiac electrograms: back to the basics and looks to the future. The webinar will present insights into the basic understanding of unipolar and bipolar electrograms. What is the importance of filter settings? How to measure and analyze? What is "far field" activation and what is the difference between onset of activation and activation time? These and other very relevant questions will be addressed in the webinar. A particular focus will be set on electrograms in atrial fibrillation ablation and ventricular tachycardia ablation. Novel mapping technologies allowing automatic high density will also be presented.

The format includes case-based presentations, online assessment and live discussions with the three key opinion leaders who will give you some useful tips for your daily clinical practice.

Speakers:

Professor Gerhard Hindricks

Department Of Electrophysiology
University Of Leipzig, Germany

Professor Pierre Jaïs

Cardiology Department
Hospital Haut Levêque, Bordeaux,
France

Host:

Doctor Wyn Davies

Cardiology Department
Imperial College Healthcare NHS Trust,
London, United Kingdom
